DECISION MEMO | SECURE MEDIA DISPOSAL

To: Linnea Ingram; Cecilia Magnusson **From:** Anders Marchetti, Computer & Information Systems Manager
Date / effective date: 1 June **Jurisdiction basis:** England and Wales, as at 1 June
Subject: Greyhaven Instruments contractual disposal outcome and service-desk control

Decision frame

Greyhaven's security schedule requires certified secure disposal of any storage media that has held client data. The same control covers fixed/internal drives, removable media, embedded drives, and whole devices containing media, regardless of whether still usable. Reimaging, reset, formatting, or deletion alone is not certified disposal. Redcliffe Utilities loaned test equipment remains client-owned until confirmed otherwise.

Planning basis (only supplied figures)

Annual volume is 120 items, approximately 70% internal/fixed and 30% removable (mix is an estimate, not invented exact counts). Internal handling is 2 staff-hours per item at $60/hour = $120 per item and about $14,400 per year at 120 items. External certified service is quoted at $95 per item = about $11,400 per year. Approved annual ceiling is $14,000. Internal-only labour therefore exceeds the ceiling by about $400; external service remains about $2,600 below it. These are planning comparisons, not invoices or commitments.

Model	Security evidence	Control / transition	Capacity & cost
Internal sanitisation/destruction	Can be defensible only with approved method, verification, and signed evidence; reimage status alone fails Greyhaven outcome.	Uses Callum/Ravi and existing custody workflow; difficult while locating legacy stock; specialist treatment needed for failed media.	2 hours × $60 = $120/item; about $14,400/year, above $14,000 ceiling.
External certified service	Signed certificate/equivalent must identify case/media, method and disposition date; reconcile to register.	Simple steady state after 30-day discovery; secure packaging, authorised collection, receipt and count reconciliation required.	$95/item; about $11,400/year, within ceiling; less service-desk handling capacity.
Bounded hybrid (not selected)	External certified destruction for Greyhaven and uncertain/failed cases; approved sanitisation only for documented non-contract cases.	Most adaptable transition, but requires two routes and strict owner/contract decision at each case.	Cost cannot be forecast beyond supplied per-item figures without inventing a split; ceiling control would be case-by-case.

Control implications and awkward cases

The procedure creates one case per item, verifies owner/client and holds, inventories hidden/secondary/removable storage, quarantines pending approval, records each handoff, and closes only after signed evidence reconciles sent, received, and certified counts. A reimaged/reissued laptop receives retrospective evidence review and controlled remediation or risk escalation—never a backdated certificate. A loaned test rig with an embedded drive requires client ownership/return or destruction authority and evidence for the embedded medium/whole rig. A lost device is an incident/exception, not successful disposal and never certificate-eligible. Missing identity, approval, or certificate means HOLD and escalation to Anders; no release, resale, donation, or redeployment.

Assumptions and record discipline

This memo invents no client records, serial numbers, certificates, legal approvals, vendors, or costs beyond the supplied planning figures. Operational cases and certificates are created only when the process runs. During the first 30 days, legacy stock is located and logged under the same evidence and custody gates; open cases carry into steady state after day 30.

Recommendation and decision: Approve the external certified-service operating model for all in-scope client-data media, with the Marchmont register, approval, quarantine, secure packaging, authorised handoff, receipt, and certificate-reconciliation controls in the procedure. It is the single model that meets Greyhaven's certified outcome, fits the 30-day transition, and stays within the $14,000 annual ceiling at the supplied planning volume. Decision: APPROVED — external certified service as the steady-state model.
