Approve one serial qualification sequence

38 operators • dual authorization maintained through press cutover • Ontario plant

Approval requested by 21 November 2025

Authorize this single baseline: complete all planned training, assessments and conditional releases by 17 December; retain 18 December for recovery before shutdown.

DECISION / HARD STOP

The annual window closes 18 Dec, immediately before the 19 Dec–1 Jan shutdown. No baseline qualification is deferred beyond the window.

CONTROLLING BOTTLENECK

Kenji Thackeray and the shared press form one serial lane: 87.5 press-hours across 104 eligible hours. Kenji is unavailable 10 Dec.

OPERATING CONSEQUENCE

Old-press authorization remains active for production through 15 Dec and fallback through close of window; new-press releases are added, never substituted.

What this sequence proves

- **New press visibly front-loaded**
  D-A 01–02 and N-A 21–22 are conditionally released before first runs on 11 Dec; D-B 11–12 and N-B 30–31 before 15 Dec.

- **Audit-ready observation**
  Foxhollow Partners observation is 16 Dec; released new-press operators are available to demonstrate the process, not unassessed trainees.

- **Feasible finish**
  The final baseline interval ends 17 Dec. The 18 Dec windows are held for missed/failed assessments or lost-window recovery, subject to the same controls.

Sequence basis

16 training groups per press: day crews max 4; night crews max 2 and never combined. All activities are press-dependent and Kenji-led; times shown on pages 2–5 are the controlling record.

DAY-BY-DAY SHARED PRESS & KENJI TIMETABLE

All displayed intervals are exclusive: one press, one assessor

AM = 06:00–11:00; PM = 21:00–00:00. Row order is the serial operating sequence. Training membership establishes crew-cap compliance.

Release rule: a failed or incomplete assessment prevents release for that press; attendance or training completion alone does not authorize operation.

OPERATOR QUALIFICATION PLAN

Release rule: a failed or incomplete assessment prevents release for that press; attendance or training completion alone does not authorize operation.

Dependencies and handoff

Eligible press access → planned training → individual satisfactory assessment → conditional release → crew minimum before first operation → all close by 18 Dec / before shutdown.

Dependency	Milestone	Control / handoff
D-A / N-A	11 Dec first operation	D-A 01–02; N-A 21–22 released before start
D-B / N-B	15 Dec first operation	D-B 11–12; N-B 30–31 released before start
Foxhollow Partners	16 Dec observation	Use only already released new-press operators; 16 Dec is a milestone, not a training substitute
Old press	Through 15 Dec + fallback to close	Old-press release remains a distinct authorization; new release does not cancel it

CAPACITY RECONCILIATION

Eligible access: 104.0 h (old-only 40.0; new-only 32.0, excluding 10 Dec; either press 32.0). Baseline: old 35.0 h + new 52.5 h = 87.5 h. Remaining unused eligible time: 16.5 h.

RECOVERY CAPACITY

18 Dec is fully open: AM 06:00–11:00 (5.0 h) and PM 21:00–00:00 (3.0 h). Earlier unused fragments total 8.5 h. Place only a real missed/failed activity into a fit-for-duration open block; do not change release status.

EXCEPTION CONTROL

Production Supervisor maintains the live status. Kenji records result; notify the Production Supervisor and Dmitri Aubert immediately for a failed/incomplete result, absence, or lost window. A lost 18 Dec recovery block puts the hard deadline at risk.

Qualification record and Ontario compliance note (current to 3 Nov 2025)

For each press and operator, capture training completion, individual assessment result, Kenji Thackeray assessor sign-off, date/time, press, and authorization status. Ontario's occupational health and safety framework requires appropriate information, instruction and supervision and competent work; Bellhaven retains this evidence to support its own plant authorization control. This recertification is Bellhaven's internal press authorization, not a government-issued operator licence or statutory certificate.

Approval decision

Dmitri Aubert: approve the single sequence on pages 1–5. It completes baseline qualification on 17 December 2025, preserves 18 December recovery capacity, and retains both authorizations during transition.
