Tuesday Shipment Reconciliation — Decision Summary

To: Bohdan Sundqvist, Bianca Ellingsen, Arjun Hendricks, Darius Rivenburgh, and Ayana Fontaine | Prepared for Thursday review

Recommendation

Submit **Option B — Standard inventory shortfall recovery for $12,000.00**. This is the lower supported valuation for five confirmed missing physical assemblies. Keep the separate **$2,990.00** IP-610 charge-only invoice overcharge with Billing for correction; do not add it to the inventory-shortfall claim or stack remedies.

Manifest shipped	Adjusted received	Billed	Receipt − billed
32 assemblies	27 assemblies	33 assemblies	−6 assemblies
Manifest value	**Billed value**	**Option A**	**Option B selected**
$80,002.50	$82,992.50	$15,445.00	$12,000.00

Reconstructed exceptions

Record / evidence	Physical result	Claim treatment	Value
TR-01 / IP-100 IP-100 Base Pump Assembly	Shipped 8; received 6; billed 8 assemblies	Option B confirmed physical shortage	$ 2,360.00
TR-03 / IP-330 IP-330 Pediatric Pump Assembly	Shipped 6; received 5; billed 6 assemblies	Option B confirmed physical shortage	$ 2,980.00
TR-04 / IP-410 IP-410 Sterile Pump Assembly	Shipped 4; received 3; billed 4 assemblies	Option B confirmed physical shortage	$ 4,850.00
TR-05 / IP-520 IP-520 High-Flow Pump Assembly	Shipped 7; received 6; billed 7 assemblies	Option B confirmed physical shortage	$ 1,810.00
TR-06 / IP-610 IP-610 Dual Channel Assembly	Shipped 2; received 2; billed 3 assemblies	Invoice correction only — no physical shortage	$ 2,990.00

Claim alternatives and why Option B is selected

Option A (Invoice correction) totals **$15,445.00**: the four physical shortages at invoice prices plus the $2,990.00 IP-610 charge-only overbilling. Option B totals **$12,000.00**: only the four confirmed physical-shortage lines at approved standard rates. The supplied terms do not establish precedence. Option B is the conservative supported valuation and avoids double recovery; the IP-610 billing issue is visible but excluded from the claim amount.

Evidence, assumptions, and review conventions

Source facts. The operative dispatch table is in *tuesday_shipment_packet.xlsx*, Tuesday dispatch!F7:T14. Carton counts are converted once using each record's Pack / carton field; all headline counts are physical assemblies. Invoice prices come from the packet's Unit rate as printed. Standard rates and permitted recovery paths come from *claim_terms_and_rate_card.docx*. The historical prior-Friday subtotal is not used.

Source-note treatment. TR-03's five is already an individual assembly count. TR-05 uses the post-count handheld scan total of six, not the carried-forward seven. TR-06's carton label and manifest support two assemblies, while the invoice bills three. TR-07 is a service-return adapter, retained as an observed item but excluded from outbound totals and any claim.

Analyst judgment — material edge case. TR-04 is treated as three received physical assemblies because the dock note specifically records three complete units and one foam void. The alternative whole-carton reading would treat the labelled carton as four received; it would remove $4,850.00 from Option B and $4,980.00 from Option A. The selected basis is applied consistently to quantity and value.

Convention — zero denominator. TR-07 has a billed/comparator quantity of zero and an adjusted shipment receipt of zero after its exclusion. Its variance ratio is shown as **N/A**, not 0% and not a calculated error. It has no applicable invoice rate or standard valuation.

Lineage. Record identifiers TR-01 through TR-07, source row references, note treatment, normalized invoice price, and terms rate-card references are retained in the accompanying reconciliation workbook. Values are USD per physical assembly.
