Cobblemoor Provisions

Maintenance-access schedule inspection record | prepared for Isabel Tikhonov | 5 June 2026

Selected candidate	Candidate B	**Applicable jurisdiction**	England
Inspection result	Compliant	**Overall status**	Pending approval
Prepared by	Tadeo Penrose	**Peer-review due**	10 June 2026, noon

Inspection result

Candidate B is the selected submission. After permitted parsing of submitted times, canonical-room mapping and one documented duplicate disposition, the corrected operating plan satisfies the England calendar, capacity, escort, precedence, electrician, noisy-testing separation and zone-changeover checks. This is an inspection result; no approval is recorded.

Candidate findings

Candidate	Finding
Candidate A	Not compliant in England. Noisy functional test row A-009 runs 08:30-09:30 on 16 June and directly abuts the fixed 09:30 public-counter block. England requires a full clear 30-minute slot; this unique submitted placement cannot be moved during inspection.
Candidate B	Compliant after permitted normalization and duplicate treatment recorded below.
Candidate C	Not compliant. Electrician assignments alternate North and South zones. The 360 minutes of electrical work have only 30 unassigned minutes within Chidi Gauthier's fixed 08:00-14:30 availability, while seven cross-zone transitions require 210 minutes of changeover time.

Jurisdiction comparison

England is applicable because the depot is in England. England prohibits noisy-testing overlap with public-counter work and requires one full clear 30-minute slot between the noisy test and every counter block. Wales also prohibits overlap, but has no clear-slot requirement. The England clear-slot rule is material to Candidate A and to the selected plan's 09:00-09:30 and 15:00-15:30 clear intervals.

Duplicate judgement and source lineage

Candidate B contains an exact repeat of electrical row B-003 (B-003X is excluded) and two conflicting Barrier setup rows. The source provides no decisive revision marker and does not establish supersession. As a documented judgement rather than a source fact, B-010A is retained at 17 June 2026, 08:00-08:30 because it preserves additional predecessor slack; the other Barrier setup row is excluded. The workbook issue register retains the observed values, resulting values and source-row references for this treatment and each normalization.

Summary and status

Required activities	16	**Scheduled activities**	16
Planned maintenance minutes	570	**Changeover minutes**	30
Retained Barrier setup	B-010A: 08:00-08:30	**Overall status**	Pending approval

Compliance has been recorded for peer review. Approval remains pending; this inspection record neither grants approval nor recommends an approval decision.
