GREYHAVEN AUTHORITY | RECORDS OPERATIONS

Corrected record-transfer briefing

Public briefing for service-notice approval • **as of the close of 18 November 2028**

6	**patient-authorised record transfers completed in Scotland** Supported public headline	**Draft:** 9 **Difference:** -3 (3 lower)	**Eldergrove:** 5 **Difference:** +1 (1 higher)

What changed

The returned draft used a retired marker and reported 9. The supported count is 6: it counts each transfer reference once and applies the current rule to the event history. Eldergrove's proposed 5 correctly identifies several draft problems, including the overlapping entries for GHT-28-042, but excludes GHT-28-044 despite its recorded valid re-authorisation before completion.

Counting method and result

11 transfer references reviewed = 6 included + 5 excluded. Overlapping entries were treated as one transfer per transfer reference. Scottish scope uses the sending-service location. A completion or delivery acknowledgement had to be recorded by the cut-off, with required authorisation evidence valid at that time.

Record-level reconciliation

All references material to the correction or Eldergrove's challenge are shown. An empty authorisation-date field remains an empty source field; no date has been assumed.

Transfer reference	Outcome	Authorisation date	Supported reason
GHT-28-041	**Include**	2028-11-01	Valid authorisation and documented timely completion.
GHT-28-042	**Include**	2028-11-02	Valid authorisation and timely completion; overlapping completed entries count once.
GHT-28-043	**Exclude**	2028-11-03	Authorisation was withdrawn before completion and was not later restored.
GHT-28-044	**Include**	2028-11-09	Valid re-authorisation preceded timely completion, restoring authority.
GHT-28-045	**Include**	2028-11-03	Completion was valid and timely; later withdrawal is prospective only.
GHT-28-046	**Exclude**	2028-11-04	Recorded completion is after the close-of-18-November cut-off.

Record-level reconciliation (continued)

Transfer-reference outcomes derived from the register event history and the Scottish rule.

Transfer reference	Outcome	Authorisation date	Supported reason
GHT-28-047	**Exclude**		Pending record has no documented completion or delivery acknowledgement.
GHT-28-048	**Exclude**	2028-11-02	Sending service is outside Scotland; recipient location does not set scope.
GHT-28-049	**Exclude**		Required authorisation evidence is not recorded; it was not inferred.
GHT-28-050	**Include**	2028-11-07	Valid authorisation and documented timely completion.
GHT-28-051	**Include**	2028-11-08	Valid authorisation and timely delivery acknowledgement.

Assumptions and exclusions

No required evidence was inferred. GHT-28-049 is excluded because its authorisation evidence and date are not recorded; its blank date remains blank in the source. A valid re-authorisation before completion restores eligibility under the rule. A withdrawal after valid completion does not change that completed outcome.

Approval decision

Options and recommendation for Idris Petrosyan

Option comparison

Issue corrected notice in current approval window	**Benefit:** resolves the disputed public figure and uses the current approval window. **Risk / mitigation:** the correction must be explained concisely so the change from the returned draft is clear.
Delay the notice	**Benefit:** permits a further joint review of the records. **Operational consequence:** misses the current approval window, leaves the disputed draft unresolved, and creates rework for the notice process.

Recommendation

Recommend issuing the corrected notice in the current approval window. The figure is reproducible under the supplied rule, each included transfer has timely documented completion or acknowledgement and valid recorded authorisation at that time, and the only absent material evidence belongs to GHT-28-049, which is explicitly excluded. This meets the approval test for issue now and addresses the need for a concise correction explanation.

Timing: the approval decision deadline is 09:30, 19 November 2028.
