ASHCOMBE LABORATORIES

Capital reserve forecast

Oversight review | Five fiscal years FY2026-FY2030

As of 30 June 2025 | 1 July 2025 through 30 June 2030 | Nominal USD, whole dollars

PRIMARY RECOMMENDATION

$700,000 per fiscal year

Approve the owner reserve contribution for FY2026-FY2030, paid at the beginning of each fiscal year. Total recommended routine funding: $3,500,000.

CONTAINMENT SENSITIVITY

$2.5m

central cash exposure

Low likelihood; severe consequence

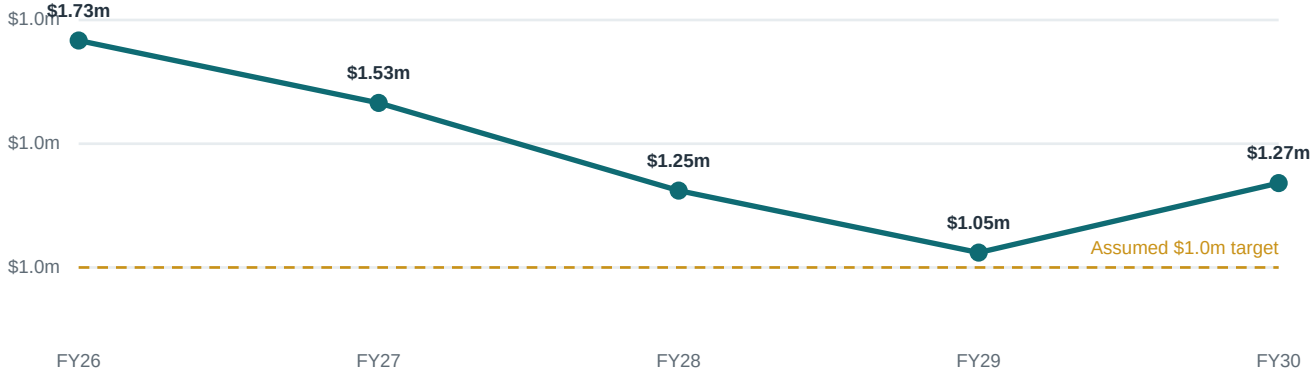
For Cecilia Havlicek's funding-plan decision before Ibrahim Pichler's submission to the portfolio oversight reviewer.

Planning draft: assumptions are disclosed because no campus reserve balance, asset register, policy, condition survey, or cost history was supplied.

Baseline forecast and recommendation

Annual contributions are modeled on 1 July and scheduled capital uses at fiscal year-end. Investment income, grants, financing, insurance, owner injections, and other external inflows are not assumed.

Metric	FY2026 2025/26	FY2027 2026/27	FY2028 2027/28	FY2029 2028/29	FY2030 2029/30	5-year total / FY2030
Recommended owner contribution	$700,000	$700,000	$700,000	$700,000	$700,000	$3,500,000
Total baseline expenditure	$216,300	$901,765	$983,454	$900,407	$475,302	$3,477,228
Ending reserve balance	$1,733,700	$1,531,935	$1,248,481	$1,048,074	$1,272,772	$1,272,772
Headroom vs $1.0m planning target	$733,700	$531,935	$248,481	$48,074	$272,772	$272,772



Recommendation support

- Opening reserve planning input: $1,250,000 as of 30 June 2025.
- Modeled minimum ending balance: $1,048,074, above the assumed $1,000,000 target.
- The uniform path aligns funding before the concentrated FY2027-FY2029 renewal program; no baseline funding gap is shown.

Scheduled capital plan and classification boundary

No generic contingency included

Each baseline use appears once, is assigned to one fiscal year, and is shown in nominal dollars after the 3.0% annual escalation assumption.

Capital use	Class	FY	Nominal cost
Building automation platform refresh and sensor migration	Prudent	FY2026	$216,300
Roof membrane and drainage interface renewal	Policy assumption	FY2027	$901,765
Central utility chiller overhaul	Policy assumption	FY2028	$611,927
Laboratory-support exhaust fan motor and drive renewal	Prudent	FY2028	$371,527
Main electrical switchgear protective component renewal	Policy assumption	FY2029	$720,326
Campus access-control server resilience refresh	Prudent	FY2029	$180,081
Fire and life-safety control panel renewal	Policy assumption	FY2030	$255,040
Site drainage reliability improvement	Prudent	FY2030	$220,262

Required under owner-policy planning assumption

Core building and campus-system renewals are provisionally classified in reserve scope pending confirmation. Total: $2,489,058.

Prudent asset management

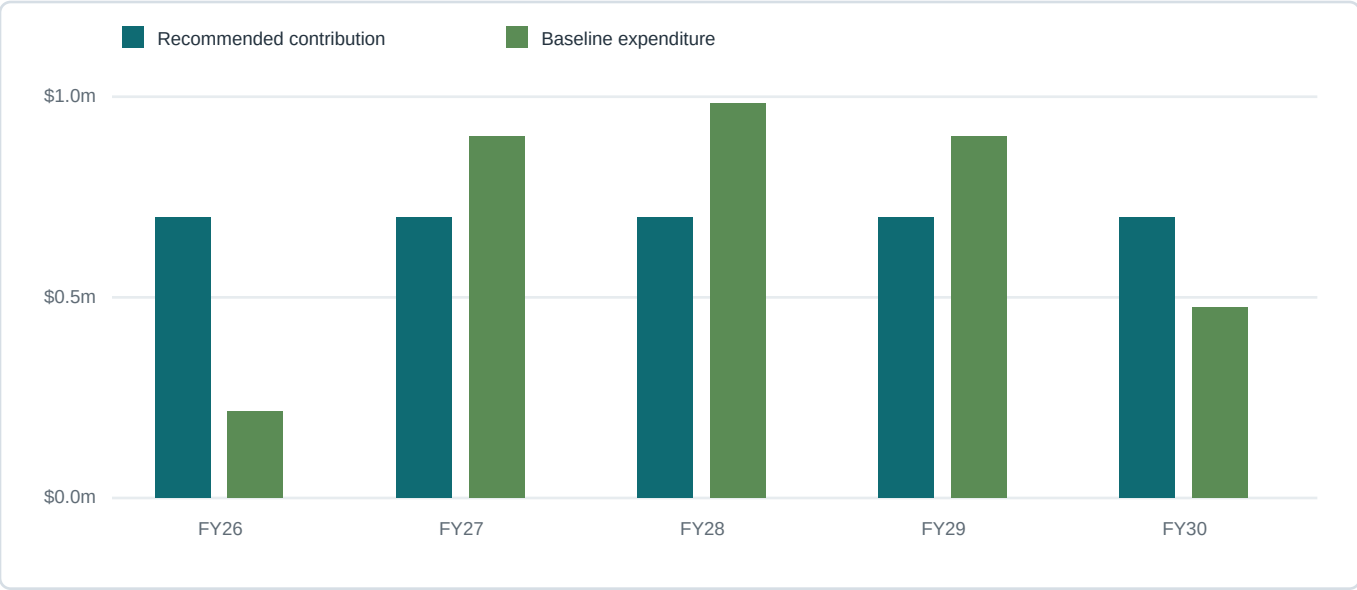
Reliability, resilience, and preservation choices are included but are not represented as owner-policy mandates. Total: $988,170.

No owner policy source was supplied. The classification is a planning interpretation, not a quoted clause, approval threshold, legal requirement, or established mandate.

Funding timing and model assumptions

How the baseline path protects the reserve position

The contribution recommendation is deliberately flat, but it is paid at the beginning of each fiscal year before year-end planned outlays. This keeps the FY2027-FY2029 concentration visible and funded without relying on outside inflows.



Model inputs

- Opening reserve: $1,250,000 planning input at 30 June 2025.
- Cost escalation: 3.0% each year from the as-of date; all values are nominal USD.
- Investment income: $0. Other routine contributions and other inflows: $0.
- Planning target: $1,000,000 ending balance, an internal planning assumption rather than an owner-policy threshold.

Reserve-scope boundary

Baseline includes only the listed capital renewals. It excludes routine maintenance, laboratory activity, ordinary emergency response, business interruption or closure costs, and unlisted capital needs. No generic contingency is used to duplicate scheduled projects.

Containment-failure sensitivity

The scenario is low likelihood and severe consequence. It is shown as a FY2028 sensitivity only; it is neither scheduled nor certain, and it is not embedded in baseline replacement allowances or routine contributions.

Scenario inputs

$1.5m - $3.5m

Central illustrative cash exposure: $2.5m. Includes the financial effect of immediate decontamination and temporary campus closure, without an operational response plan.

Funding posture

Reserve eligibility is not assumed. No insurance, grant, owner funding, recovery, or other external source is assumed. Baseline funding remains $700,000 per year.

Decision consequence

A full central draw materially exceeds the modeled FY2028 reserve position, so the event cannot be treated as an ordinary renewal allowance.

FY2028 reserve sensitivity	Amount
Baseline ending reserve balance	$1,248,481
Less: central illustrative event draw	($2,500,000)
Pro forma ending if full central draw	-$1,251,519
Shortfall vs $1.0m planning target	$2,251,519

Proportionate action

Do not fund the full event through normal reserve contributions. Treat it as a separate owner decision on contingent liquidity, risk-transfer options, and confirmed recovery before reliance. This forecast does not allocate or guarantee external recovery.

Decision record and limitations

Requested decision

Approve $700,000 annual owner reserve contributions for FY2026-FY2030.

The primary path totals $3,500,000, supports $3,477,228 of scheduled baseline capital uses, and retains a modeled FY2030 ending reserve balance of $1,272,772. It does not fund the full exceptional containment scenario.

Decision boundaries

- Use the policy-required versus prudent split as a provisional planning boundary; confirm its owner-policy interpretation before treating it as authoritative.
- Keep the containment failure as a separately governed sensitivity rather than silently adding its full amount to routine reserves.
- Validate opening reserve, asset timing, scope, cost estimates, reserve eligibility, and any possible recovery source as source information becomes available.

Limitations

No asset register, condition assessment, cost history, owner policy, insurance terms, or funding commitment was supplied. This forecast is an assumption-based planning view; it does not guarantee future costs, reserve sufficiency, policy compliance, or approval by Cecilia Havlicek or the oversight reviewer.

Prepared for funding-plan review. No detailed engineering assessment, emergency-response plan, or operational playbook is included.
