One bounded answer to the service / verification collision

Executive operating procedure | Rental counter | policy position as of 1 June 2025

HEADLINE MEASURE

13

normalized verification-related cases

Four weeks ending 1 June 2025
5 in the prior period -> +8 cases / +160.0%

RECOMMENDATION 01

Adopt one controlled Pending Verification branch

Same-day counter service is a documented acknowledgement and status update. It does not promise completion. Keys and equipment remain unreleased until the payer/renter identity match is verified.

OPERATING EFFECT

Respond today / hold release / keep the case visible

The decision preserves the same-day customer response while keeping the identity match as a hard handover gate.

The pressure is verification, not just volume

Four weeks ending 4 May 2025 compared with four weeks ending 1 June 2025 | aggregate log evidence only

MEASURE	4 MAY	1 JUN	CHANGE
Raw log rows	96	124	source rows
Repeat rows	8 (8.3%)	14 (11.3%)	linked / flagged
Distinct cases	**88**	**110**	**+22 / +25.0%**
Normalized verification-related	**5**	**13**	**+8 / +160.0%**

Distinct cases = raw rows - repeat rows. Repeat rows remain linked to the source log and are excluded from the distinct-case count.

Interpretation: the aggregates show magnitude, not cause. Inconsistent labels could conceal the operational pressure.

HEADLINE MEASURE

+160.0%

normalized verification-related cases

5 -> 13

SOURCE LABEL RECONCILIATION

Earlier: 5 labelled ID hold
Later: 4 ID hold + 9 verification pending = 13

The labels remain distinct in the source record, but both are one normalized operational condition for comparison.

160.0% verification growth vs 25.0% distinct-case growth

The counter's standard path: respond, verify, release or hold

One branch governs ordinary cases and incomplete cases; the identity match remains the release gate.

01

CAPTURE

Case/reservation reference; renter and payer identity details; requested item or rental; contact route; timestamps.

02

FIND + LINK

Search the existing case or reservation before opening a new record. Link repeat contact and flag it; never delete the source row.

03

VERIFY

Record attempt and result. Retain the source label and add the normalized class. Uncertain? Escalate to an authorized verifier or manager.

04

RELEASE GATE

Only a verified payer/renter match permits key or equipment handover. No temporary or informal workaround.

05

PENDING

If incomplete, set Pending Verification: blocker, owner, evidence, exact update clock, escalation, and message.

SAME-DAY RESPONSE IS A SERVICE DEFINITION

A documented acknowledgement + current status + outstanding verification requirement + next update point.

It is not guaranteed same-day completion. If the match is not verified, the case stays Pending Verification and no keys or equipment are released.

25 minutes to close: completion is impossible, so the record stays truthful

Worked application of the single Pending Verification branch

LIVE CASE

Mismatch + unreachable payer

Apply the same branch even when the clock is short.

T - 25 MIN

Receive request; mismatch is present.

BEFORE CLOSE

Attempt payer contact. Record route, timestamp, and unreachable result.

SAME DAY

Send the neutral status message. Do not hand over keys or equipment.

CLOSE / NEXT PERIOD

Set Pending Verification. Duty manager / authorized verification owner takes the case with a timed review and shift handoff.

Outcome: pending, not complete / abandoned / auto-cancelled

NEUTRAL CUSTOMER RESPONSE STRUCTURE

We have logged your request. Handover is paused while we verify the payer/renter identity match. Please provide or confirm the outstanding identity information through the approved route. We will update you at [exact recorded time].

REQUIRED CASE RECORD

- Case reference; event timestamps; staff or role involved.
- Verification attempt, available evidence, result; decision/status and blocking reason.
- Escalation owner plus the handover payload: status, evidence, attempts, message, and promised update time.
- When it resumes, record verification outcome and actual handover/other disposition; close only after final communication and closure timestamp.
- Original issue label plus normalized classification; attribute any label change to role and time.

A credible threat is a separate safety exception

Last month: one credible threat at the counter. The ordinary verification path pauses; it does not absorb an immediate safety risk.

SEVERE EXCEPTION

SAFETY FIRST

- Pause or end the transaction; create distance or move to safety where possible.
- Follow the site's emergency or security route and summon appropriate help under that route.
- Do not confront, pursue, physically restrain, or make accusatory claims to the customer.
- After immediate safety: escalate to the appropriate manager, security, or emergency route and record objective facts: words, actions, time, witnesses, and actions taken.

Resume ordinary rental only after the site is safe and an authorized role clears it.

COUNTER OWNS

Capture, duplicate control, label traceability, status, customer communication, evidence logging, safe handover control, and routine escalation.

The counter is not the legal or financial decision maker.

SPECIALIST CONTROL REGISTER | CURRENT STATUS: UNRESOLVED

LEGAL | UNRESOLVED

- What retention, access, and disclosure rules apply to case, verification, and incident records?
- What notice/consent wording and treatment applies when suspected identity misuse is recorded?

Needed before record/notice rules are embedded.

FINANCE | UNRESOLVED

- Who may authorize deposit hold/release or refund when verification blocks handover?
- What authority and accounting treatment applies to reversal, credit, or compensation?

Needed before blocked-case money action is communicated or posted.

Decision requested: approve the bounded Pending Verification branch

For the rental counter | policy position as of 1 June 2025

BOARD APPROVAL

Approve one controlled rule for the rental counter:

Respond the same day with a documented acknowledgement, current status, outstanding verification requirement, and next update point. Release no keys or equipment until the payer/renter identity match is verified. If completion is impossible, keep the case in Pending Verification with its blocker, owner, evidence, timed review, neutral customer communication, and shift handover where required.

No forced closure. No unverified handover. No invented Legal or Finance rule.

Headline measure: normalized verification-related cases | 5 -> 13 | +8 cases | +160.0%

Counter: capture / link / status / communicate / hold / escalate | Authorized verifier or manager: acceptability of verification | Legal + Finance: open controls

BOARD DECISION: APPROVE THE SINGLE PENDING VERIFICATION OPERATING BRANCH.
