Scottish Record Transfer Rule

Reporting rule for the public completed-transfer figure

Purpose and reporting date

This rule governs the Scottish public figure for patient-authorised record transfers. The reporting cut-off is the close of 18 November 2028.

1. Scottish scope

A transfer is in Scottish scope only where the **sending service location** recorded in the transfer register is Scotland. Recipient location, destination and any other geographic connection do not determine scope.

2. Completed transfer test

A transfer is reportable only when documented completion or delivery acknowledgement is recorded no later than the reporting cut-off and patient authorisation is valid at the moment of that completion. Each transfer reference is reported once, even where the register shows multiple event or status entries.

3. Authority over time

A withdrawal ends authority prospectively. A later valid re-authorisation restores authority for a subsequent completion. A withdrawal recorded after a valid completion does not retrospectively remove that completed transfer.

4. Evidence not recorded

Required authorisation evidence cannot be inferred. Where the required evidence is absent, the transfer is not included in the public completed figure.
