Amberfield Works

September apprenticeship announcement | internal attention-planning briefing

Planning scenarios, not predictions.

Prepared for Priya Salcedo and Edith Wickramasinghe. The current planning date is 18 Sep 2026; decisions are about temporary spokesperson cover, regional monitoring, and the first reassessment point.

DECIDE

When to hold spokespeople

Baseline and High-interest: 17-24 Sep 2026. Delayed-launch: 1-8 Oct 2026.

FOCUS

Where to monitor

North & Borders carries 50.0% of Baseline allocation and 54.1% of High-interest allocation.

CHECK

What changes the plan

Log observed original items, duplicate treatment, region, and timing before changing the staffing posture.

What the evidence says

The historical log is a source-level record, not a raw-count forecast. The reconciliation keeps the detailed grouping and correction trail in the evidence workbook.

31
source records

22
distinct eligible earned editorial items

2
network clusters counted once

1
local rewrite retained separately

Counted as a coverage signal

One count per distinct earned editorial item. Network copies are grouped to a canonical record. The local rewrite stays separate because its retained note identifies local reporting not present in the network item.

Limits held in the log

Owned, paid, calendar, and administrative records are excluded from earned editorial counts. SIG-004 has a supported date correction; SIG-019 has a supported regional correction. SIG-027 has no supportable outlet attribution and stays unresolved.

Three planning scenarios

Each case is a planning treatment applied to the same reconciled evidence base. No case asserts that future coverage will occur.

Scenario	Monitoring window	Package total	What changes
Baseline	17-24 Sep 2026	**14**	Median eligible analogue count x regional readiness + converted confirmed pitches.
Delayed-launch	1-8 Oct 2026	**10**	Window moves 14 days; 65% retention is applied separately from timing.
High-interest	17-24 Sep 2026	**37**	Baseline x 210% + each region's hook increment.

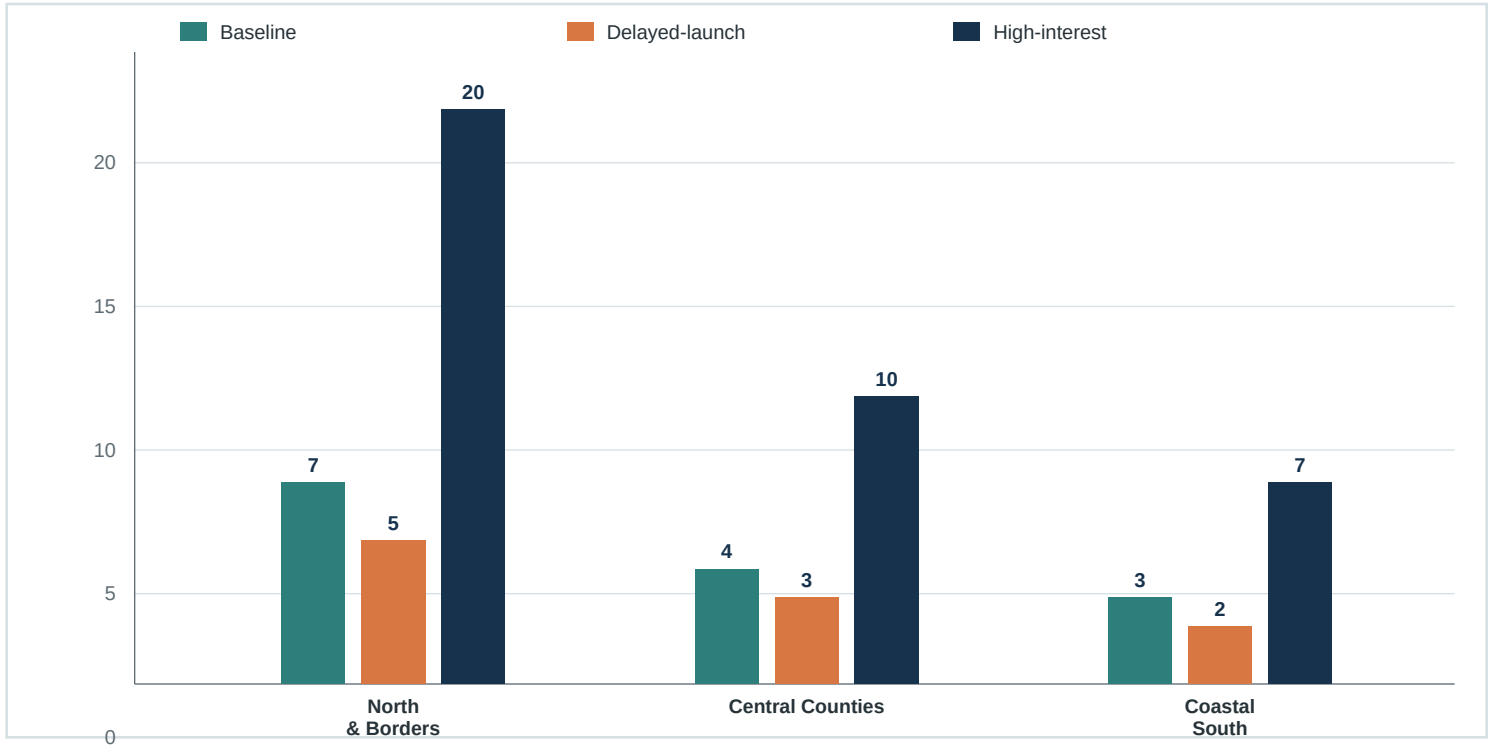
Timing is not evidence of decline

Delayed-launch moves intensive monitoring from 17-24 Sep 2026 to 1-8 Oct 2026. Its total of 10 follows the separate 65% planning retention assumption; it is not an observed result.

Planning scenarios, not predictions.

Regional attention

Whole-mention estimates by region. The High-interest chart scale extends above the unfinished 15-value draft range so the North & Borders result remains visible.



Region	Baseline	Delayed	High
North & Borders	7	5	**20**
Central Counties	4	3	**10**
Coastal South	3	2	**7**

Capacity signal

North & Borders High-interest = 20

The full result is retained because a fixed maximum of 15 would understate the scenario's temporary staffing requirement.

Spokespeople and monitoring

Use allocation as a staffing guide, then adjust only after observed records are reviewed in the live register.

Region	Baseline allocation	Delayed allocation	High-interest allocation	Temporary response
North & Borders	50.0%	50.0%	54.1%	Primary spokespeople and first-pass monitoring coverage.
Central Counties	28.6%	30.0%	27.0%	Secondary watch; keep a response path ready.
Coastal South	21.4%	20.0%	18.9%	Light active scan; escalate on original local signals.

1. Hold the window

Intensive cover is 17-24 Sep 2026; if timing changes, move it to 1-8 Oct 2026.

2. Log observed records

Use the blank Monitoring Register. Select the controlled region, scenario window, review status, and originality values; do not turn forecast values into observed records.

3. Check early signals

After the first 48 hours, compare original items, duplicate clusters, region, and timing with the scenario assumptions before changing cover.

Assumptions and next check

The workbook is the audit trail; this page identifies the decisions that matter for the meeting and first live review.

Inputs held in the model

- Planned launch: 18 Sep 2026; Baseline and High-interest monitoring: 17-24 Sep 2026.
- Baseline: median eligible analogue count x readiness + confirmed pitches x 0.5, rounded to whole mentions.
- Delayed-launch: shift 14 days to 1-8 Oct 2026, then apply 65% retention.
- High-interest: Baseline x 210% plus the regional-hook increment.

Corrections and first live check

- SIG-004: source date corrected from 10 Apr 2024 to 11 Apr 2024 from the retained timestamp note.
- SIG-019: source region corrected from Central Counties to North & Borders from the outlet-location note.
- SIG-027: outlet remains blank because the archive evidence does not support an attribution.
- Once monitoring begins, review original items, duplicate treatment, regional concentration, and timing before changing staffing.

Planning scenarios, not predictions.
