Order Inspection Standards — Oregon snapshot

Applicable as of 30 June 2025 | Limeworth Logistics wholesale wine and spirits desk

OI-01 — Verify order identity and purchasing authority (planned supervised hours: 12)

Verify that each order is tied to the correct customer account and an authorized purchasing contact before ins

1. Match the order number, order date, customer account, and delivery location to the order source and account record.
2. Confirm the named purchasing contact or authority in the account record; do not infer authority from an email signature alone.
3. Check that the order source is present and legible, and preserve its reference when a field is missing or inconsistent.
4. Record the observable identity or authority variance and report it through the established exception channel.

OI-02 — Inspect product, package configuration, quantity, and substitution details (planned supervised hours: 16)

Inspect ordered products and line details against the source order so product, package, quantity, and substitu

1. Match brand, product name, vintage or item identifier, and package size to the source order and available item record.
2. Verify package configuration (bottle count, case or pack size, and unit of measure) before comparing quantities.
3. Compare ordered, shipped, and invoiced quantities; record a quantity mismatch once using clear, normalized wording.
4. Check substitution lines against the source order and record the observed substitute and source reference without approving a change.
5. Report missing, conflicting, or illegible product details as an observable exception.

OI-03 — Inspect price, discount, deposit, tax, and account-term fields (planned supervised hours: 12)

Inspect monetary and account-term fields against the applicable source records and record only the values and

1. Match unit price, extended price, and price tier to the source price record for the account and item.
2. Check discount type and amount, deposit or bottle charge, and tax treatment against the applicable order or account record.
3. Verify payment, freight, and other account-term fields are present and consistent with the source record.
4. Record a price, discount, deposit, tax, or term variance with the affected field and source reference; do not choose a remedy.
5. Report unresolved or conflicting commercial fields through the established exception channel.

OI-04 — Record and report order exceptions with source traceability (planned supervised hours: 20)

Create an accurate, traceable inspection record and report order exceptions using observable facts and preserv

1. Record order ID, line or field checked, expected value or source, actual observed value, and the date or time of inspection.
2. Preserve the source reference (order, invoice, account record, call, or email) so another reviewer can locate the evidence.
3. Use one normalized issue description for each underlying variance, separating duplicate wording variants and repeated lines.
4. Distinguish observed facts from opinions or proposed remedies; report the variance without approving an amendment or recommending a sales decision.
5. Maintain inspection-record accuracy of 99.5% across checked fields and report exceptions through the established channel.

Only inspection, factual recording, source preservation, and reporting are within this material.
