Colorado Retail Delivery Fee Dispatch Brief

Frozen rule snapshot for Silverbrook Bureau Colorado fulfilment work | Effective 1 January 2027

Rule application

The Colorado retail delivery fee is **USD 0.31 per applicable retail order**. Apply it once to an order delivered by motor vehicle to a Colorado destination when Destination State is CO, Sale Class is Retail, Exemption Status is None, and at least one associated line is Taxable. Parcel and pallet are the motor-vehicle delivery options used in this workflow. Customer pickup carries no Colorado delivery fee.

Do not multiply the fee for additional lines, quantities, packages, shipment splits, or merchandise value. No fee applies when the destination is outside Colorado, Sale Class is Resale, Exemption Status is Valid exempt purchaser, or no associated line is Taxable. Parcel and pallet quotes and Customer Pickup Cost exclude the Colorado delivery fee; show the fee separately from the base freight or handling amount.

Required dispatch fields

Order inputs	Order ID; Destination State; Sale Class; Exemption Status; Parcel Eligible; Parcel Quote; Pallet Eligible; Pallet Quote; Customer Pickup Eligible; Customer Pickup Cost
Order-line inputs	Order ID; Line ID; SKU; Quantity; Unit Price; Taxability
Calculated order outputs	Line Count; Taxable Line Count; Merchandise Total; Input Status; Parcel Delivery Fee; Pallet Delivery Fee; Customer Pickup Delivery Fee; Parcel Modeled Total; Pallet Modeled Total; Customer Pickup Modeled Total; Recommended Method; Recommendation Rationale
Dropdown values	Taxability: Taxable / Not taxable. Sale Class: Retail / Resale. Exemption Status: None / Valid exempt purchaser. Eligibility: Yes / No. Authorization Decision: Authorized / Not authorized.

Readiness and recommendation

A complete order has Order ID, Destination State, Sale Class, Exemption Status, all three eligibility selections, a cost for every option marked Yes, at least one linked line, and complete required data on every linked line. An ineligible option has blank delivery-fee and modeled-total outputs and is excluded from recommendation.

Use Ready, Incomplete inputs, No eligible option, and Review tie for readiness and review. The recommended method is the eligible option with the unique lowest modeled total: Parcel, Pallet, or Customer pickup. An exact lowest-cost tie requires Review tie. The approved workbook defined name for the fee-rate assumption is **CO_RDF_RATE**.

Operational handoff

The comparison is a dispatch recommendation only. Naledi Fitzgerald separately records the final authorization decision, date, and initials after reviewing the order comparison.
