CONSOLIDATED CASE LINKAGE PACKET

Sablefield County Sheriff's Office | Halcyon Alarm & Monitoring review

Prepared by: Sgt. Desmond Iwuchukwu **Intended supervisory recipient:** Capt. Solange Beaumont

Purpose and concise assessment

This packet consolidates six separately closed Sablefield County commercial-burglary reports for review as one investigative lead. Source facts show no-forced-entry losses at six premises and one Halcyon operator event, recorded as "USER CANCEL - authorized user requested cancellation," within each corresponding reported loss window. These recurring, time-proximate pairings support further consolidated review; they do not identify a person, establish motive, prove common authorship, or make a legal determination.

Halcyon's presence alone is not sufficient to link cases. The comparison population shows four other Halcyon accounts with user-cancel activity and no reported loss. The indicator presented here is the combination of the source-reported loss, the no-forced-entry observation, and a time-proximate user-cancel record, not vendor use by itself.

Traceability: each cancellation shown above is within 90 minutes of its paired reported loss window. Exhibit status denotes an analytical linkage indicator for review, not an attribution.

Exhibit 2 — Comparison population: user cancel with no reported loss

Distinct qualifying accounts: 4. These records are comparison-only accounts; they are not additional burglary incidents.

Account ID	Account label	Comparison-period label	User-cancel event	Reported loss status	Packet disposition

Exhibit 3 — Source rate / ratio rows

Population	User-cancel events (denominator)	Reported losses (numerator)	Losses / user cancel
Six linked burglary accounts	6	6	1.00
Comparison accounts with user cancels and no reported loss	4	0	0.00
Accounts with no user-cancel events in review extract	0	0	Not calculable (denominator = 0)

Methods and limitations

Cancellation records were de-duplicated using the source-defined Cancellation Record Key: Account ID + Operator Event Timestamp + Event Type. The repeated overlapping presentation of HA-18472 | 14 Mar 2024 04:58 | USER CANCEL is counted once and displayed once. “Linked Case Helper (retired)” was treated as non-authoritative and was not used to establish any incident, account, timing, or comparison relationship; current report identifiers, account fields, timestamps, event wording, and comparison-period records control this packet.

For the source row with zero user-cancel events (the denominator), the rate is shown as “Not calculable (denominator = 0),” rather than as a numeric rate. A reported loss window is the window recorded in the source narrative; a user-cancel entry records operator-entered wording and time. The available materials do not resolve who made a request or why, and no inference beyond the stated source facts and analytical indicators is offered.
