Frontline Submission Brief

Overbrook Works | Yewbank Clinic / Foxglove Analytics follow-up | Friday submission gate

CURRENT STATUS	**PENDING - no record-level evidence supplied** No final rate, count or case conclusion is available. Use the controlled reconciliation record for follow-up.

Handle the two types of finding differently

Data-quality issue **Duplicate closure or severity-label query**	Preserve the source record. Enter only the non-identifying source reference and evidence status in the controlled reconciliation workbook. Route it to the reconciliation or clinical/compliance reviewer as **Pending review** or **Visible data-quality limitation**. Do not decide that two closures are duplicates merely because they look alike.
Potential privacy incident **A separate confidential concern**	Do **not** circulate, screenshot or copy the concern. Refer it promptly and confidentially to Information Governance / the incident-response lead. Give the minimum necessary secure source reference, access or sharing timing, data category, recipient/context and containment taken. Do not decide breach, harm or notification yourself.

Protect the source record

Do not delete, overwrite, relabel, merge, backfill or otherwise alter source case records merely to improve the reported rate. Record an authorised assessment or reconciliation action in the controlled workbook; the source system remains under its own authorised owner and audit trail.

The disputed rate is not a performance measure

Do not copy the disputed or provisional rate into performance scorecards. Do not use it to rank staff or units, or for disciplinary decisions, until the evidence is reconciled and an authorised calculation is available.

Before the Friday submission gate

- Use only the controlled reconciliation workbook to record follow-up; keep case detail to the minimum necessary.
- For a possible duplicate, preserve the record and send the evidence path to the reconciliation reviewer. Only a confirmed duplicate closure can be excluded; the valid underlying event remains auditable.
- For a severity query, preserve the original label and route the evidence for authorised review. An unclear label stays visible and is not scored.
- For a potential privacy concern, use the confidential Information Governance / incident-response route immediately. It is separate from the rate calculation.
