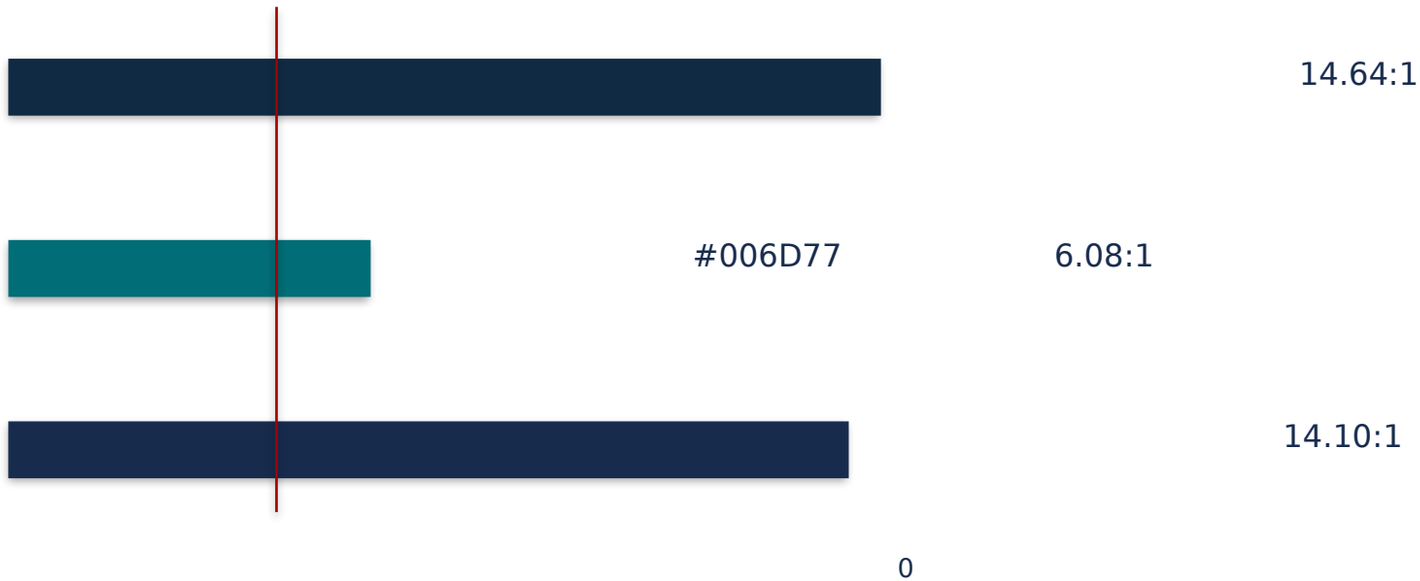
Design token contrast

ORIGINAL EXAMPLE DESIGN / OFFLINE REFERENCE STUDY



4.5:1 Normal text AA reference

Ratio axis begins at 0. Contrast alone is not full WCAG conformance.

Foreground | Background | Exact ratio | Normal text recommendation

#102A43 | #FFFFFF | 14.6416242989 | Recommended (>=4.5:1)

#006D77 | #FFFFFF | 6.0801932845 | Recommended (>=4.5:1)

#172B4D | #FFFFFF | 14.1020344485 | Recommended (>=4.5:1)

Design token contrast / 1

Actual values

Use the calculated contrast ratios of #102A43, #006D77 and #172B4D against white.

Contrast method

Use WCAG relative luminance and the (L1+0.05)/(L2+0.05) ratio, not RGB averaging.

Chart baseline

The bar chart ratio axis starts at zero.

Value labels

Each bar has its numeric ratio label rounded to two decimal places.

Design token contrast / 2

Threshold line
A distinct 4.5:1 line is labelled Normal text AA reference.

Scope note
The chart explicitly states that contrast alone is not full WCAG conformance.

Text table
An adjacent table lists hex code, background and unrounded calculation values.

No color-only legend
Every bar has a text label and does not require color matching.

Design token contrast / 3

Source anchor
The method cites WCAG 2.2 SC 1.4.3 from the offline source.

Recommendation
Only combinations at or above 4.5:1 are recommended for normal text.

No invented study
No user research sample or usability improvement percentage is invented.

Small view
A 320 px alternative uses the value table rather than miniature unreadable bars.
